Atlanta, GA - 2018 to 2021

- The Georgia Tech Coding Boot Camp covers a full stack: HTML5, CSS3, JavaScript, jQuery, Bootstrap, MongoDB, MySQL, Express, Node, & React
- Prepare for questions and help students reach the answer with your guidance
- Circulate around class during code activities/projects to assist students and help with debugging problems

Owner/Operator, Uncle Maddio's Pizza

Atlanta, GA - 2012 to 2016

- Held positions of owner and restaurant GM during the lifecycle of the business
- Responsible for every aspect of restaurant operations, leadership, and training
- Facilitated implementation of PAR Technology's Brink POS Software

Manager, Pappas Restaurants

Atlanta, GA - 1998 to 2011

- Consistently scored A rating from Health Department by creating/managing system to self-evaluate adherence to standards established through leading educational meetings with employees
- Created/managed system for forecasting labor targets and established departmental parameters to achieve targets
- Achieved #1 food and supplies cost within Pappadeaux concept
- Implemented new POS software system and served as IT Manager

WEB APPLICATION PROJECTS

Perfect Partner

Add spontaneity to a relationship with randomized text "nudges":

- MongoDB, Express, React, Node, Google Sign-In, Twilio, Material-UI
- Ongoing personal project which began as a Trilogy group final [Project 3](#)
- Users answer a series of questions to set up text reminders to be a better partner

Homework Status

Display data from the Trilogy Bootcamp Spot Grades API:

- MongoDB, Express, React, Node, Material-UI, MUI-Datatables
 - Personal project inspired by a desire to quickly assess students homework status
 - Enhanced GUI to view and manipulate the data returned from the Trilogy Bootcamp Spot Grades API endpoint
-
